Auto-Negotiation (802.3u)	The media converter supports auto negotiation on the 10/100/1000 Base-TX interface.
Link Pass-Through	Using Link Pass-Through with Far-End Fault minimizes data loss when a fault occurs. Should a fault occur, the end devices have the indication of a failure available to them making trouble shooting easier.
Far-End Fault (FEF)	The action the media converter takes on receiving a Far-End Fault Indication is dependent on the Link Pass-Through switch setting.
Pause (IEEE 802.3xy)	The media converter supports pause negotiation on the 10/100/1000 Base-TX copper connection.
VLAN	The media converter is transparent to VLAN tagged packets.
Remote LoopBack	The media converter is capable of performing a loopback on the fiber port.
